

FD-ITS1 Traffic Radar

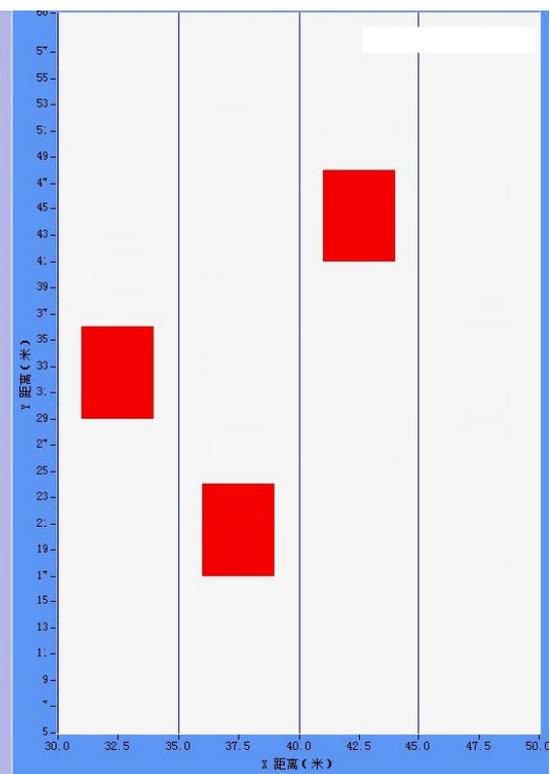

Advance :

ITS-1 traffic radar is a novel microwave vehicle detection sensor. By using the advanced microwave technology and digital signal processing technology, ITS-1 radar can detect the distance-azimuth-speed information of the vehicle; And it can also be used for road vehicle monitoring and realize multi-lane monitoring at the same time with precise speed and range detection capability.

Features :

Detection the distance, speed, azimuth of 64 targets
Easiest to install & operate
Eight-lane detection with a range of 200m
All-weather and all-condition performance
Onboard flash memory protects data storage
Remote accessible for easy management
No performance variance due to temperature
